

# STUDY OF OLDER DRIVERS

2012  / ROAD SAFETY  
GRANT PROGRAMME

**IAM**  
INSTITUTE OF  
ADVANCED MOTORISTS

## THE PROJECT

The project involved the use of a simulator to study the behavior of older drivers and to identify the most common types of accident. Using a TRS DigiCar simulator the results of the study aimed to provide a universal source of information, valid in all FIA countries.

## RESULT

The study provided a small but revealing snapshot into age-related differences in visuo-cognitive ability and driving behavior. It gave valuable insight into why older drivers are over-represented in failed to look accidents and paved the way for remedial initiatives.

### AT A GLANCE

- Research Study

### RSGP FUNDING
